Responsible AI Usage

Fluxline Resonance Group, LLC, doing business as Fluxline, and TerenceWaters.com
Version: *2.0*
Effective Date: *November 20, 2026*
Last Updated: *November 20, 2026*
Replaces: *Responsible AI Usage effective November 6, 2026*

Let's be direct: we use AI.

We use it to help us think, draft, research, and build. We also build products that use AI on your behalf, such as the RCF AI Companion. This page explains what AI does here, what it does not do, and who is accountable. We would rather you know than guess. A tool you can see clearly is a tool you can trust, and a tool you can trust leaves the Window of Choice where it belongs: with you.

1. Our Commitment

AI assists. People decide. We treat AI as a tool: a mirror and a builder, never the deciding factor. For readers and customers, every AI answer informs and you decide, and nothing pushes a choice. For Fluxline, Terence Waters directs the work, verifies the output, and is accountable for every decision AI helped shape.

Every AI-assisted piece of our own work is reviewed, verified, and personally owned before it reaches you.

2. How We Use AI in Our Own Work

2.1 Content creation. AI helps us draft and refine blog posts, scripts, and episode outlines; develop concepts, designs, code, and frameworks; generate ideas; and edit for clarity, tone, and structure. Our editing always ends with a human final pass.

2.2 Research and analysis. AI helps us synthesize large volumes of information, find patterns, and check facts. It helps us verify facts and never to fabricate them.

2.3 Podcast production. Episodes may include AI-generated components. A real person reviews and verifies every episode before publication.

2.4 Consulting and client work. We tell clients when and how we use AI. Our consultants stay in control of the conversation and the decisions. AI gives us efficiency and support.

3. AI in Our Products

Some of our products let you use AI directly. These are different from Section 2, because **a person does not review an AI answer before you see it.** That is why the rules here are strict.

3.1 The RCF AI Companion

The RCF AI Companion is a study tool for readers of *The Resonance Core Framework™*.

- **Book only, cited always.** It answers only from the book (and the Workbook, for Workbook owners). Every answer cites chapter and section. If the book does not say it, the Companion says so.
- **Disclosed as AI.** The Companion uses generative AI, and every Companion chat shows a notice that tells you so.
- **Not a persona.** It has no name, no personality, and does not speak about itself in the first person. It is not a coach, a therapist, or a personal companion, and it does not give personal advice.
- **Governed on every request.** Every cloud request goes through our governance system before and after the model runs. If governance is unavailable, the Companion is unavailable. It fails closed.
- **Nothing kept by Fluxline.** Fluxline does not retain your questions or answers. Our AI provider, Microsoft Azure, keeps temporary automated abuse-detection logs (up to 30 days) under its policy, as described in the Privacy Policy. We remove personal identifiers we can detect before a question is processed, and our governance system never receives a user identifier. The Privacy Policy explains the limits and the one exception (an answer you choose to report).
- **No training.** Nothing you ask is used to train any AI.
- **Adults only.** You must be 18 or older, and the Companion checks your account's confirmation before any question reaches an AI service.

3.2 AI in our apps

- **On your device first.** Where an app offers AI, it runs on your device by default, so your entries do not leave it.
- **Cloud AI is your choice.** Optional cloud features turn on only when you choose them, feature by feature. You can turn all AI off at any time with the **AI Kill Switch.**
- **AI never writes your journal for you.** An app may ask you a deepening question, spot trends across your own entries, or help you form a goal from your own data. The raw data from you is the point, and the words stay yours.
- **No shame.** We do not use AI or notifications to guilt, pressure, or reprimand you.

3.3 Governance

Every cloud AI request in our ecosystem passes through our governance system, which checks the question type, removes personal identifiers it can detect, approves the request once at the front, and checks every answer at the end. Model safeguards are a last barrier beneath that system, not a substitute for it. Audit records keep what proves the system behaved (model, timing, pathway) and never what anyone asked.

3.4 Models and data location

We use approved model families, hosted on Microsoft Azure, and a small set of documented exceptions for non-generative tasks such as converting text to search vectors. All data we store stays in the **United States.** Some models are offered only as Global deployments, so processing of a scrubbed request can happen in another Azure region. No reader or user content is used for training, and when the book changes we rebuild the index. We do not retrain anything. The Privacy Policy has the full account.

3.5 Safety

- **Crisis messages are fixed, not generated.** One set of crisis and referral messages, written and reviewed with clinicians, is used word for word across every Fluxline app. A person or the interface shows them. AI does not write or reword them.
- **Referral notices.** Where a topic may need professional advice (health, mental health, legal, financial and tax, relationships, safety at home), our tools may show a notice pointing you toward a qualified professional.
- **Not an emergency service.** If you or someone else is in immediate danger, contact your local emergency services.

---

4. What We Do Not Do

- We do not publish AI-generated content without human review.
- We do not use AI to fabricate facts, quotes, or credentials.
- We do not mislead audiences about the nature or origin of content.
- We do not use AI in ways that compromise client confidentiality or data privacy.
- We do not outsource judgment. Every decision of consequence is made by a person.
- We do not train, fine-tune, or tune any AI model on your content.
- We do not retain your Companion questions or answers. Microsoft Azure's temporary abuse-detection logs are described in the Privacy Policy.
- We do not give an AI feature a human name or a persona, or let one pretend to be a person.
- We do not use AI to pressure you into a purchase, a renewal, or a decision.
- We do not sell your information. The store and the Companion show no ads.

---

5. Transparency as a Practice

When AI meaningfully contributes to a piece of work, we say so. For example: *"This content was created with AI assistance and reviewed by [Author Name]."* Where an AI feature talks to you, we say that, in plain words, on every screen where you consent to it.

Every Fluxline consent screen carries the same five statements, word for word:

1. Fluxline does not retain your prompts or answers. Our AI provider, Microsoft Azure, keeps temporary automated abuse-detection logs (up to 30 days) under its policy; see our Privacy Policy.
2. This companion answers only from *The Resonance Core Framework*™.
3. It is not a personal companion and does not give personal advice.
4. Nothing you ask is used to train any AI.
5. You can delete everything in one step, and nothing will link back to you.

---

6. Human Accountability

AI does not take responsibility. People do.

Fluxline Resonance Group and TerenceWaters.com accept full accountability for all content and services, regardless of the tools used. Terence Waters is the accountable owner for decisions AI helped shape.

7. Our Ethical Standards for AI

- **Truthfulness.** We do not present AI output as fact without checking it.
- **Fairness.** We work to recognize and reduce bias in AI output, and we test our products against it.
- **Privacy.** We do not send personal or client data to third-party AI systems without your consent, and our governance system removes personal identifiers before cloud processing.
- **Accountability.** A named person owns every decision.
- **Transparency.** We tell you when AI is in the loop.

We align our AI work with the **NIST AI Risk Management Framework 1.0** (https://www.nist.gov/itl/ai-risk-management-framework) and its Generative AI Profile (NIST AI 600-1), and our security work with the NIST Cybersecurity Framework 2.0. These are frameworks we follow. They are not certifications. NIST has said that the AI RMF is under revision, so we will update this reference when a new version is published.

8. What AI Can and Cannot Do

AI can be wrong, incomplete, or out of date. It can reflect bias from the material it was built on. Our tools show their sources so that you can check them. Treat AI output as a starting point. Do not use it as medical, mental health, legal, financial, or tax advice.

9. Your Choices

- Turn off all AI in an app with the **AI Kill Switch.**
- Choose cloud AI feature by feature, or not at all.
- Report an answer you think is wrong. It is optional and per answer, and it is not linked to your account, so we cannot reply to you.
- Delete your Companion data in one step.
- Ask us anything about our AI practices at support@fluxline.pro.

10. Staying Current

AI changes quickly. We track developments and review this policy regularly. When something changes, we update this page and the **Last Updated** date. For a material change, we will tell you by email or in the product.

11. Questions and Feedback

If you have questions, concerns about specific content, or suggestions, we want to hear them.
